

# At last... Large-scale grapple

# performance

# In a compact machine size

## **Builtrite SSG Grapple (Patent Pending) from Northshore Manufacturing**

**O**wners and operators of skid-steer loaders and mini excavators have long wished for a grapple that provides big attachment performance for their smaller base machines. The wait is over. The new patent-pending SSG line of grapples from Northshore Manufacturing enhances skid-steer performance, making tasks that were once impossible, suddenly doable. Ideal for use by a range of professionals including landscapers, scrap recyclers, construction crews and more, the SSG Grapple further maximizes versatility of smaller base machines.

**Grab a hold of productivity with a Builtrite SSG.**

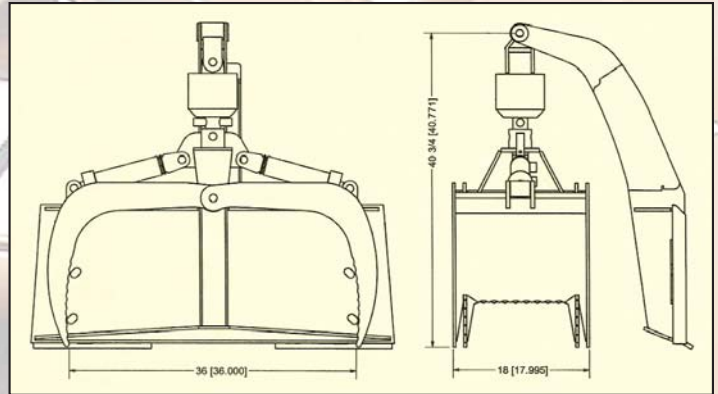

# SSG: What's in it for you?

The SSG's size alone makes it a valuable addition to any fleet. The list of SSG standard features is equally impressive and includes:

STANDARD FEATURES:

- Light weight without sacrificing strength
- Unique boom design which allows the load to be carried with loader arms in a low position (lower center of gravity means increased stability).
- Boom configuration affords better visibility during the handling process. Attachment also stores easily and allows fast, easy hook-up.
- Designed to fit all popular skid-steer brands
- Full 360° rotation offered as standard
- 36 inch and 48 inch opening for large material movement and handling
- Combination bypass/butt-style grapple design for added attachment versatility.

SSG Grapple	SSG-36	SSG-48
Attachment Weight (with bracket)	440 lbs	490 lbs.
Grapple Width	18 in.	18 in.
Grapple Opening	36 in.	48 in.
Skid Steer Operating Load	2,400 lbs.	3,000 lbs.

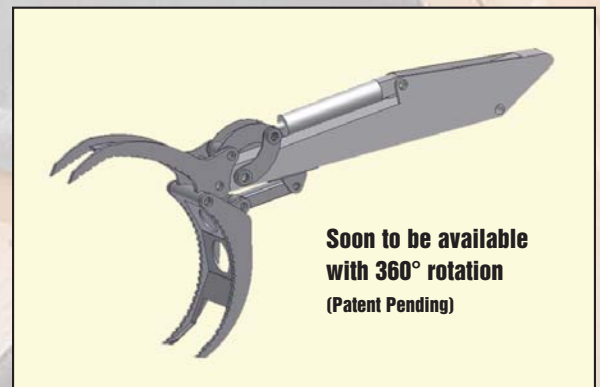

*“The SSG was designed with the customer in mind. As a result, it's been hugely successful — and productive — since day one. This is a tool that will definitely fill a need for skid-steer users.”*

— Jim White, Sales Director,  
Larson Equipment Co., Northfield, MN

## Mini-X Grapple

The small machine/big performance advantages aren't limited to owners of skid steers alone. Contractors who count a mini-excavator as part of their fleet can now get great grapple performance as well. Three different models and sizes of Builtrite Mini-X Grapples — for machines from 3,600 lb. to 11,000 lbs. — are designed to meet a host of handling needs. When closed, the grapple arms bypass to close at 4 in. — tight enough for handling even small logs in a landclearing operation.

And, like the full line of Builtrite attachments, the Mini-X Grapple features all T-1 construction for durability in even the most challenging environments.

Soon to be available  
with 360° rotation  
(Patent Pending)
