

The Builtrite™ 1/4 Cord, Log Bunching Grapple is designed for grabbing and handling both multiple and single, short wood logs. Key features include:

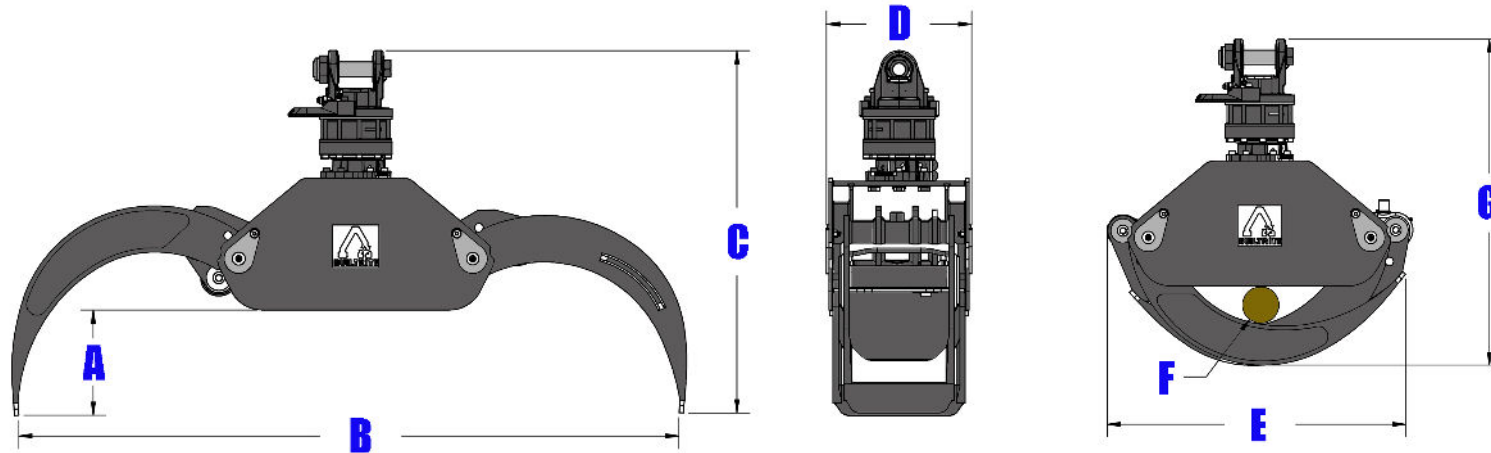

- 360° continuous rotation, using a tried and true, extremely reliable, vane style rotator
- The side plates are squared, allowing the grapple to be used to straighten out piles of logs.
- A wide opening (74"), with curved tines curl logs into the grapple's throat, allowing the grapple to grab multiple logs or when closed, can handle and grip single logs with ease.
- A single cylinder, combined with a timing link, is contained in the grapple's lower head (body), keeping the cylinder out of harm's way and allows the jaws to be synchronized, when opening and closing.

If you're looking for the toughest, most durable grapple on the market, look no further...make it a **Builtrite™**.
